EEZY KEYZ® Video Conferencing Solution

Our Conferencing Solution offers confidential real-time messaging. Chat messages, attachments, screen sharing, and audio/video calls are truly end-to-end encrypted. Our solution provides high audio/video quality, resilience over unstable networks, and ultimate privacy.

Technology Transfer

Technology transfer allows your organization to self-host and manage all of the servers and services required by the EEZY KEYZ® system. This way your organization has full control over the service and encryption keys. Technology transfer also offers the possibility to integrate our solution as part of your existing system through a separate project.

EEZY KEYZ® Email Encryption Solution

Our Email Encryption Solution guarantees that emails and attachments cannot be hacked while in transit or when stored, and spear phishing attacks are eliminated. You can continue using your preferred email system and existing addresses, and the operating system you want.

UI Customization

User interface can be customized according to your organization's needs. For example, colors can be matched to your organization's color theme, your organization's logo can be used and the applications can be localized based on your organization's operating countries.

Encrypted P2P Video Conferencing Solution
